Office Action Summary

Application No.

09/347,390

Applicant(s)

EGGERS ET AL.

Examiner

Michael Peffley

Art Unit

3739

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 17 January 2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-40 is/are pending in the application.
- 4a) Of the above claim(s) 4,5,9,12-14,18-22 and 27-40 is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-3, 6-8, 10, 11, 15-17 and 23-26 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Priority

It is noted that in addition to the applications recited in the Cross Reference to Related Applications section of the specification there are numerous other co-pending applications which disclose and claim very similar and/or identical subject matter. In accordance with 37 CFR 1.105 and MPEP 704.11(a) subsection G, applicant is respectfully requested to disclose all co-pending applications and related patents and identify the specific claims of those applications and/or patents which may present double patenting issues with the instant application claims.

Election/Restrictions

Claims 28-40 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on January 17, 2005.

Additionally, applicant elected the embodiment of Species 1 (Figures 1-2E and 14) and asserts that claims 1-8 and 10-27 read on the elected species. However, it is the examiner's position that claims 4 and 5 read on the embodiment of Figure 12, claim 12 reads on Figure 17, claims 13 and 14 read on Figure 23 and claims 18-22 read on Figure 18 and therefore do not read on the elected embodiment of Figures 1-2E and 14. As such, claims 4, 5, 9, 12-14 and 18-22 are withdrawn from consideration. Also, Figures 1-2E and 14 do not show the means for automatically translating the probe through the heart wall as set forth in claim 27, and this claim is withdrawn as well. The following is an action on claims 1-3, 6-8, 10, 11, 15-17 and 23-26.

Art Unit: 3739

Specification

The disclosure is objected to because of the following informalities: the claim for priority to related applications must be updated to reflect the most current status of the related applications (e.g. US Patent Number or "abandoned").

Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3, 6, 11 and 23-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Aita et al (5,389,096) in view of the teaching of Swartz et al (5,902,289).

Aita et al disclose a laser catheter device for performing PMR procedures. The catheter is advanced into the ventricle of a heart and then used to form channels within the heart wall. Aita et al fail to specifically disclose the use of electrosurgical energy as the treatment energy. The particular channel size (applicant's claim 11) is deemed to be an obvious consideration for one of ordinary skill in the art and commensurate in size with the catheter used by Aita et al. Further, one of ordinary skill in the art would obviously, if not inherently, terminate the delivery of energy when the wall of the heart was penetrated to prevent the ablation of non-targeted tissue.

Swartz et al disclose another cardiac treatment catheter apparatus. In particular, Swartz et al teach that it is generally known in the art to substitute various well-known energy modalities in a cardiac ablation catheter. In particular, Swartz et al teach that it is known to use either laser or RF energy for ablating cardiac tissue (col. 11, lines 3-12). It is the examiner's position that the disclosure of Swartz et al would suggest to one of ordinary skill in the art that it would be obvious to substitute an RF energy catheter for the laser energy catheter of Aita et al for performing the PMR procedure.

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Aita et al ('096) and Swartz et al ('289) as applied to the claims above, and further in view of the teaching of Rudko (5,125,924).

The combination of the Swartz et al teaching with the Aita et al system has been addressed previously. Neither Swartz et al nor Aita et al specifically disclose the firing of ablative energy in concert with a monitored EKG cycle.

Rudko et al disclose a laser heart ablation catheter. In particular, Rudko et al teach that it is advantageous to monitor EKG activity and synchronize the delivery of ablative energy with specific intervals of the EKG cycle to more safely treat the heart tissue. That is, ablative energy is fired when the heart is in its most stable state to prevent errant firing of ablative energy on the moving heart.

To have provided the Aita et al system, as modified by the teaching of Swartz et al, with a means to synchronize the delivery of ablative energy during calm periods of

Art Unit: 3739

the heart beat cycle to more accurately deliver the ablative energy would have been an obvious consideration for one of ordinary skill in the art in view of the teaching of Rudko.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-3, 6-8, 10, 11, 15-17 and 23-27 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-31 of U.S. Patent No. 5,873,855. Although the conflicting claims are not identical, they are not patentably distinct from each other because the minor variations in the claimed method steps are deemed obvious to one of ordinary skill in the art.

Claims 1-3, 6-8, 10, 11, 15-17 and 23-27 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-32 of U.S. Patent No. 5,683,366. Although the conflicting claims are not identical, they are not patentably distinct from each other because the minor variations in the claimed method steps are deemed obvious to one of ordinary skill in the art.

Art Unit: 3739

Claims 1-3, 6-8, 10, 11, 15-17 and 23-27 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-104 of U.S. Patent No. 5,697,281. Although the conflicting claims are not identical, they are not patentably distinct from each other because the minor variations in the claimed method steps are deemed obvious to one of ordinary skill in the art.

Claims 1-3, 6-8, 10, 11, 15-17 and 23-27 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-56 of U.S. Patent No. 5,697,882. Although the conflicting claims are not identical, they are not patentably distinct from each other because the minor variations in the claimed method steps are deemed obvious to one of ordinary skill in the art.

Claims 1-3, 6-8, 10, 11, 15-17 and 23-27 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-11 of U.S. Patent No. 6,032,674. Although the conflicting claims are not identical, they are not patentably distinct from each other because the minor variations in the claimed method steps are deemed obvious to one of ordinary skill in the art.

Claims 1-3, 6-8, 10, 11, 15-17 and 23-27 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over the pending claims of copending Application No. 09/054,660. Although the conflicting claims are not identical, they are not patentably distinct from each other.

Art Unit: 3739

because the minor variations in the claimed method steps are deemed obvious to one of ordinary skill in the art.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Aita et al (6,156,031) disclose a device for cardiac revascularization, the device including a catheter with RF electrodes. Similarly, Negus et al (5,893,848) discloses a revascularization catheter system which uses RF energy (among other sources) for creating channels. Negus et al further disclose various means for determining channel depth and controlling the delivery of energy.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Peffley whose telephone number is (571) 272-4770. The examiner can normally be reached on Mon-Fri from 6am-3pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Linda Dvorak can be reached on (571) 272-4764. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
